The advantages of a height adjustable table

Today the work environments are no longer a simple functional area, but they have become a vital space in which to operate at ease.

Thanks to the telescopic table it is possible to meet the requirements of flexibility, dynamism and ergonomics. The electric lifting columns are fast, reliable and offer an elegant and quiet setting.

And it is demonstrated that a comfortable table and ergonomic office helps us to increase productivity as well as the physical and mental well-being of the person.

A height adjustable desk allows you to choose your working position more

suited to your body, eliminating the inconvenience of poor posture due at a height too high or too low of monitors and keyboards. The use of a sit-stand desk allows you to take care of themselves, moving and reactivating the body without leaving own work position.

Alternating moments standing or sitting improves circulation and provides energy to the body, relieves tension, stress and stimulates creativity.

Finishing desk tops

- White
- Light Oak
- Beech
- Canadian Oak

Legs finish

- White
